

Docker

O que é Docker?

“ [...] Docker é uma plataforma aberta, criada com o objetivo de facilitar o desenvolvimento, a implantação e a execução de aplicações em ambientes isolados. ”

(Gomes, 2019, p. 16)

Arquitetura Docker

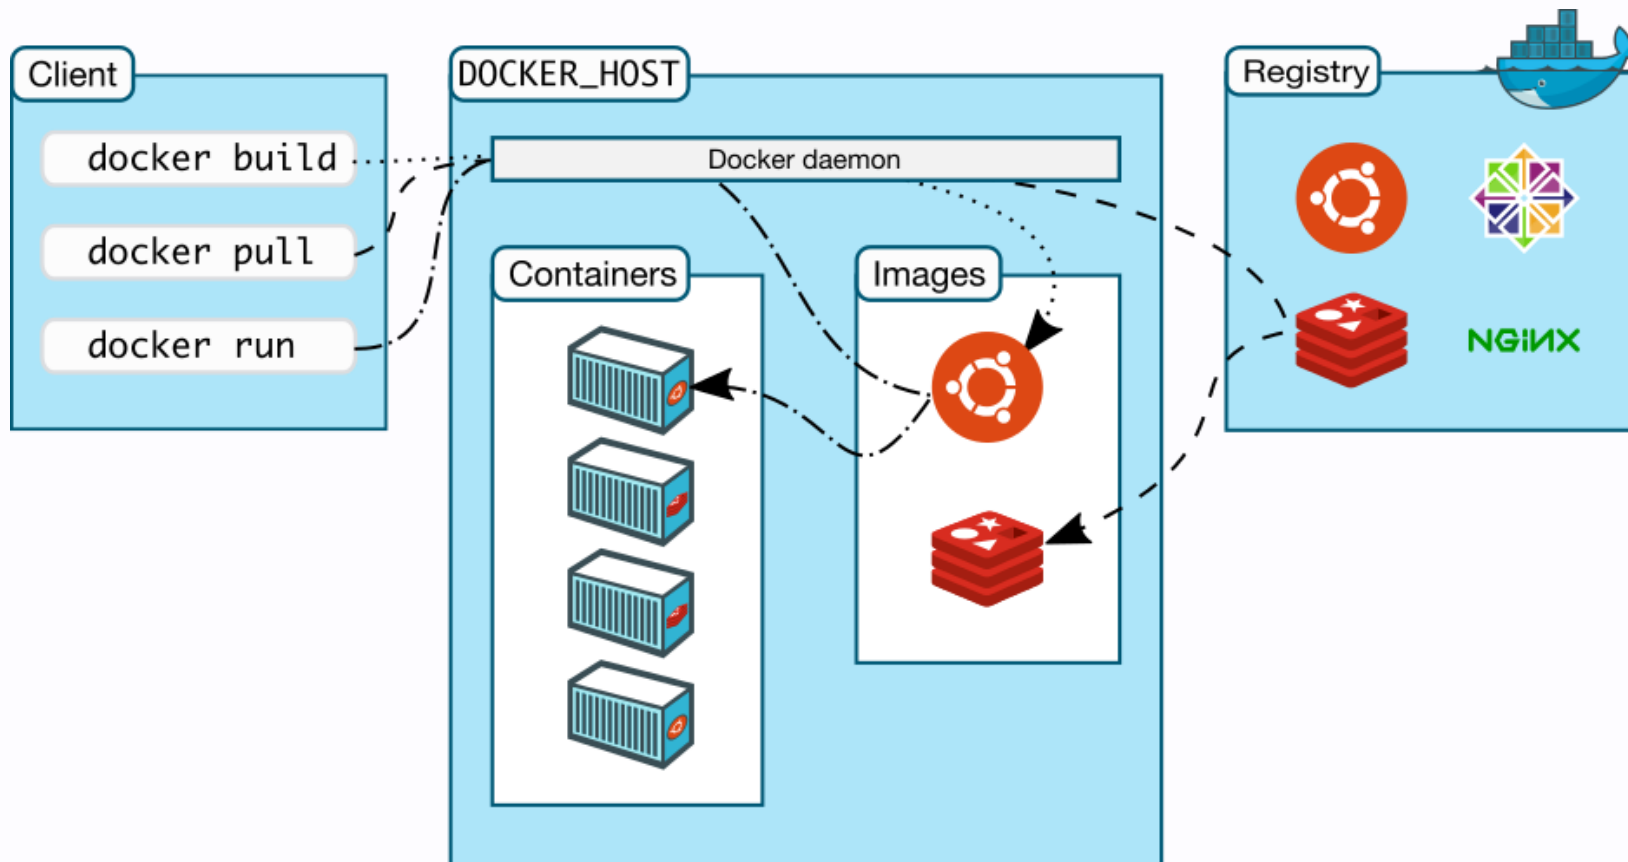

Imagem retirada de <https://docs.docker.com/engine/docker-overview/#docker-architecture>

Demo

Abra o terminal

```
ctrl + alt + t
```

Instale o Docker

```
curl -fsSL https://get.docker.com | bash
```

Adicione seu usuário ao grupo Docker

```
sudo usermod -aG docker $USER
```

Visualize o status do Docker

```
sudo systemctl status docker
```

Olá mundo em Docker

```
docker run hello-world
```

Hello `from` Docker!

This message shows that your installation appears `to` be working correctly.

To generate this message, Docker took `the` following steps:

1. The Docker client contacted `the` Docker daemon.
2. The Docker daemon pulled `the "hello-world"` image `from the` Docker Hub.
(amd64)
3. The Docker daemon created `a new` container `from` that image which runs `the` executable that produces `the` output you are currently reading.
4. The Docker daemon streamed that output `to the` Docker client, which sent `it to` your terminal.

To `try` something more ambitious, you can run `an` Ubuntu container `with`:

```
$ docker run -it ubuntu bash
```

Share images, automate workflows, `and` more `with a` free Docker ID:

<https://hub.docker.com/>

For more examples `and` ideas, visit:

<https://docs.docker.com/get-started/>
